Creating a new ELS Pro in the ELS software offline version

Start the ELS software.

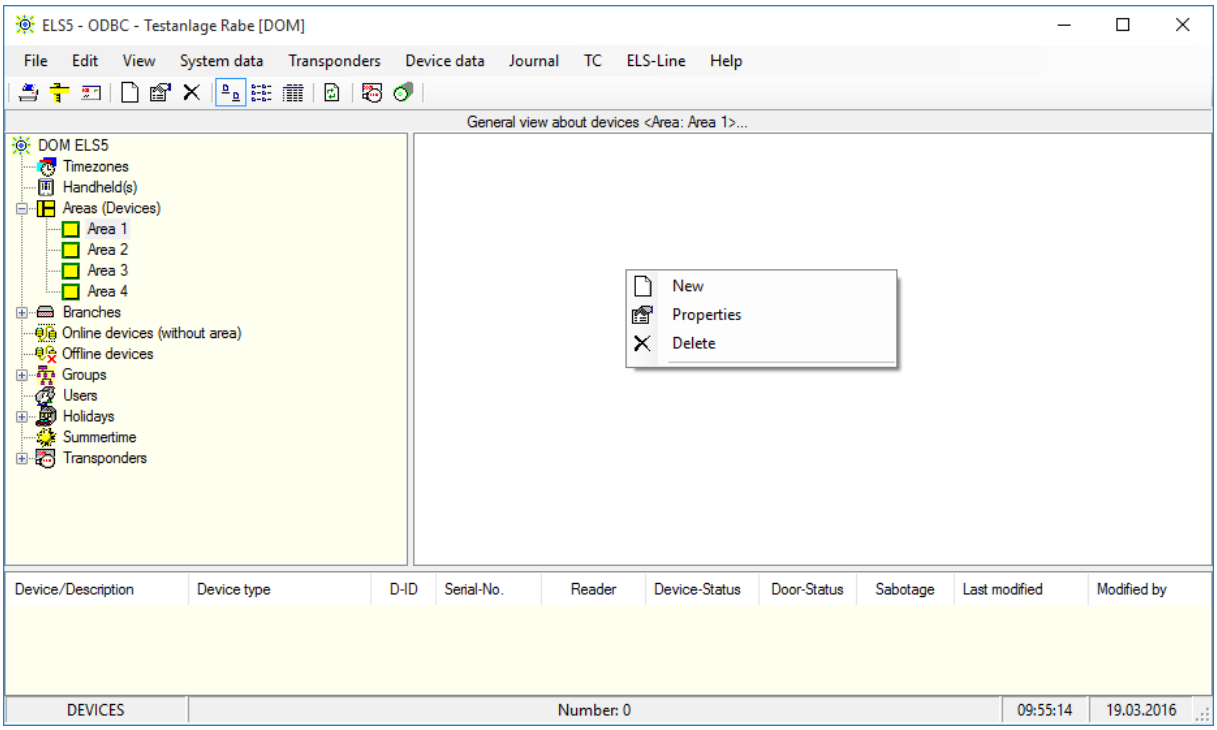

Enter the password "**4711"** and click [**Login**]. (Please change your password after your first login)

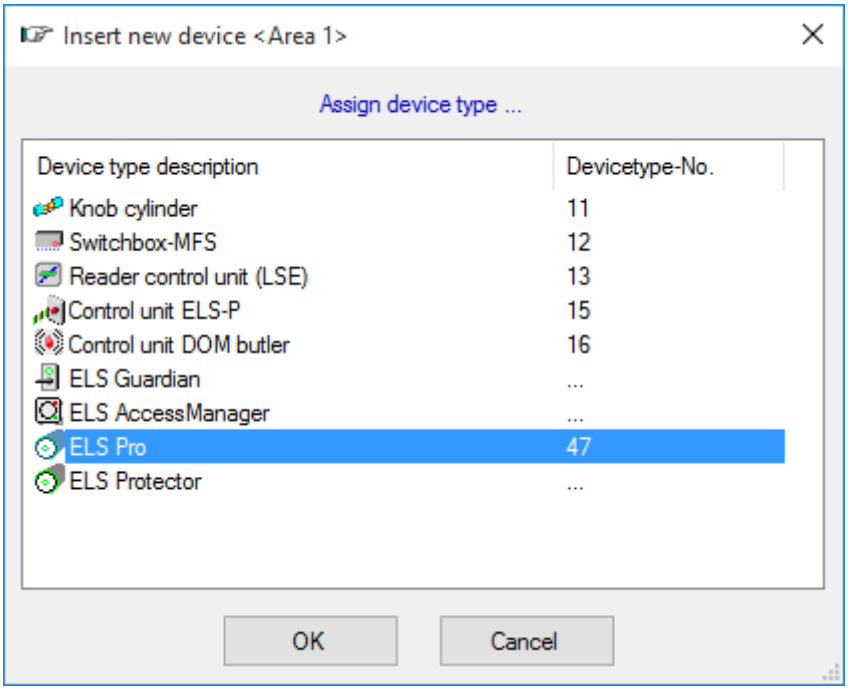

Creating ELS Pro (offline version)

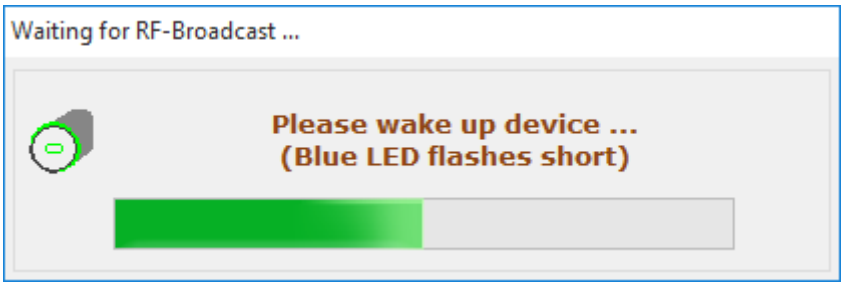

Create a new area or select one of the existing areas.
Click the right-hand mouse button, select **New** and confirm by clicking the left-hand mouse button.

Select ELS Pro.

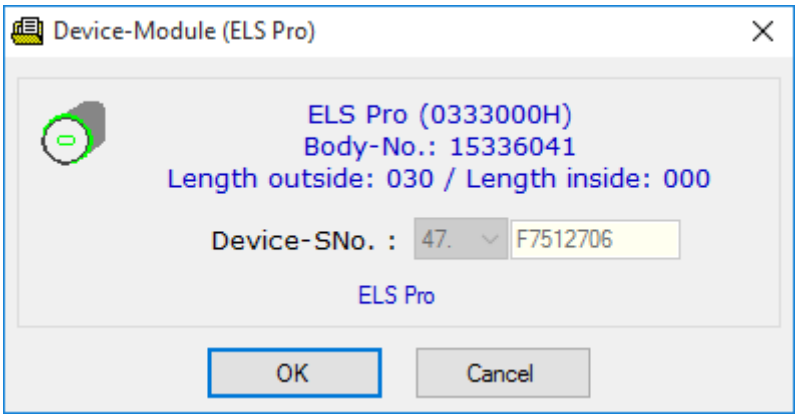

Waiting for wireless broadcast window is opened.

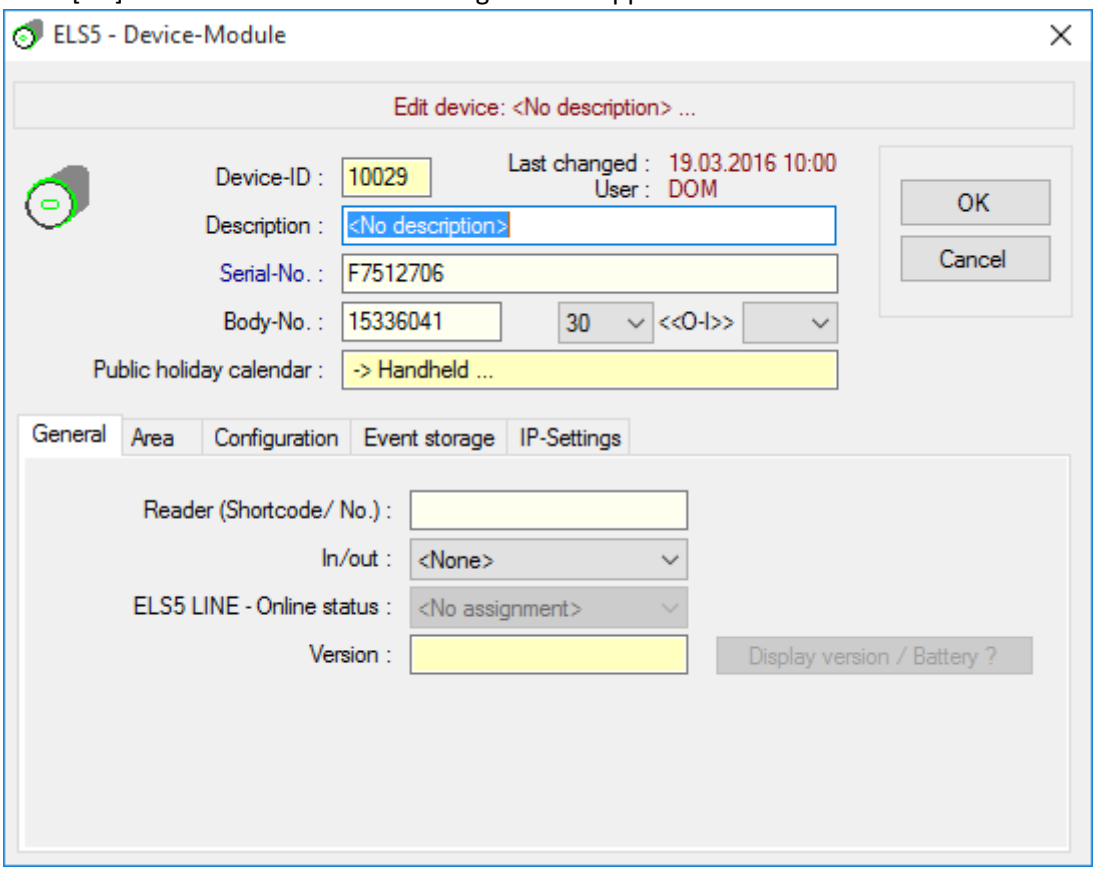

Present the wireless wake-up card within the next 10 seconds, the green bar becomes shorter.

If you cannot keep to the 10 seconds time window, repeat the above process.

Once the wireless wake-up card has been presented, the following window appears.

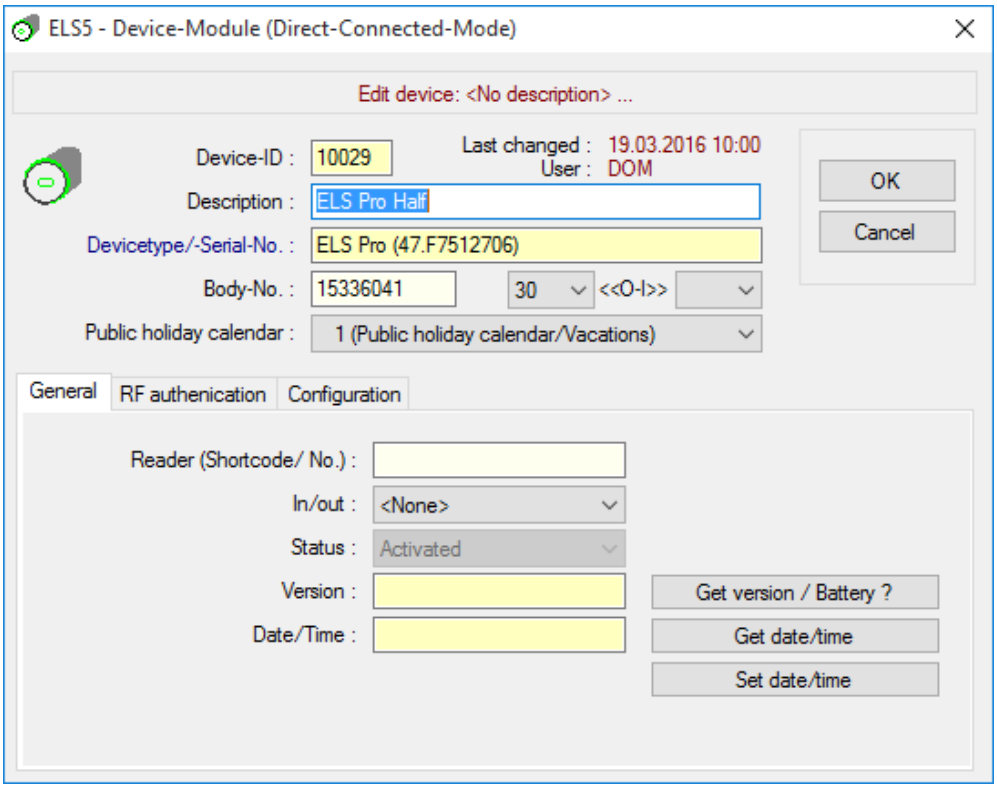

After [OK] has been clicked the following window appears.

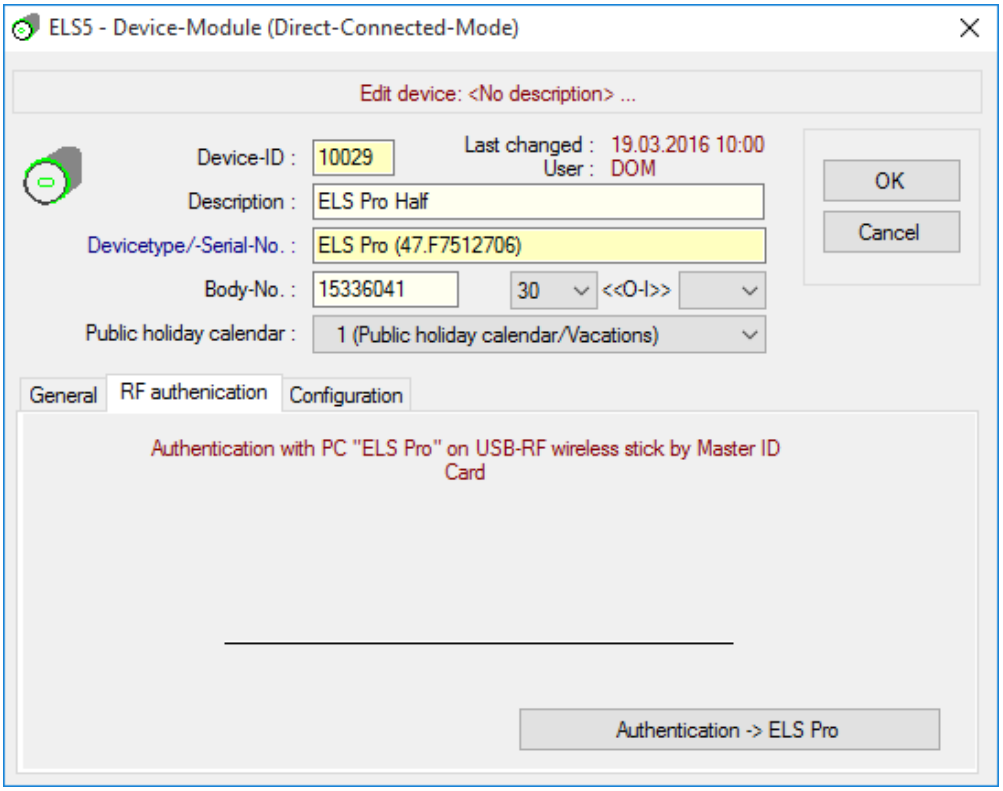

Enter a name for the device here and set the status to **Activated.**

For example:

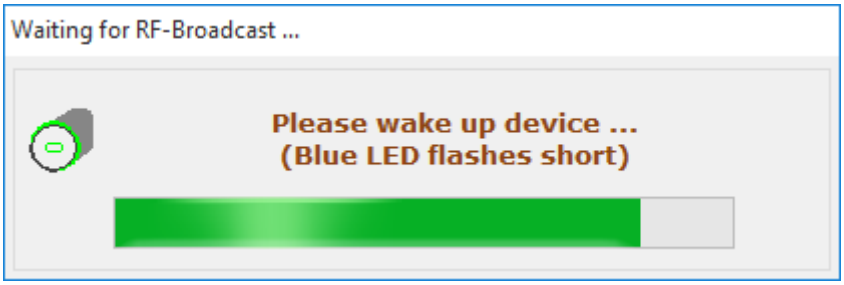

Confirm by pressing [OK].

Double-click the new device and click the tab **Wireless authentication.**

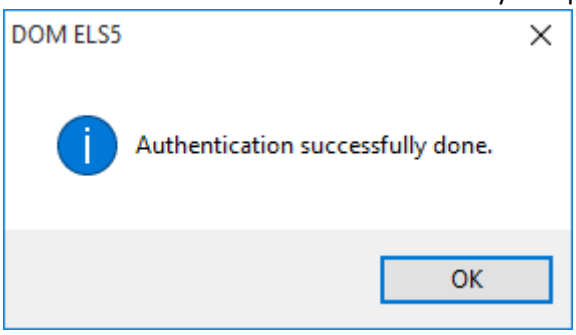

You need the master card to carry out authentication.
Click the button [**Authentication -> ELS Pro**].

Waiting for wireless broadcast window is opened.

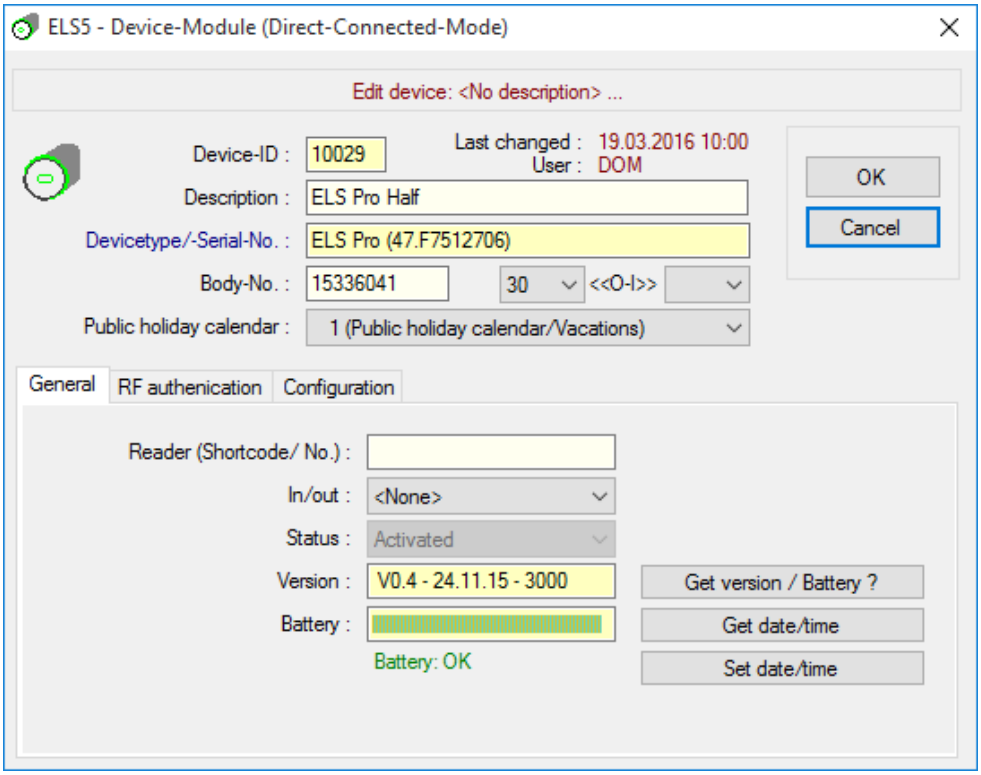

Present the master card first, and wait for the 2nd green flash.
Then present the wireless wake-up card.

Once authentication has been successfully completed, the following window appears.

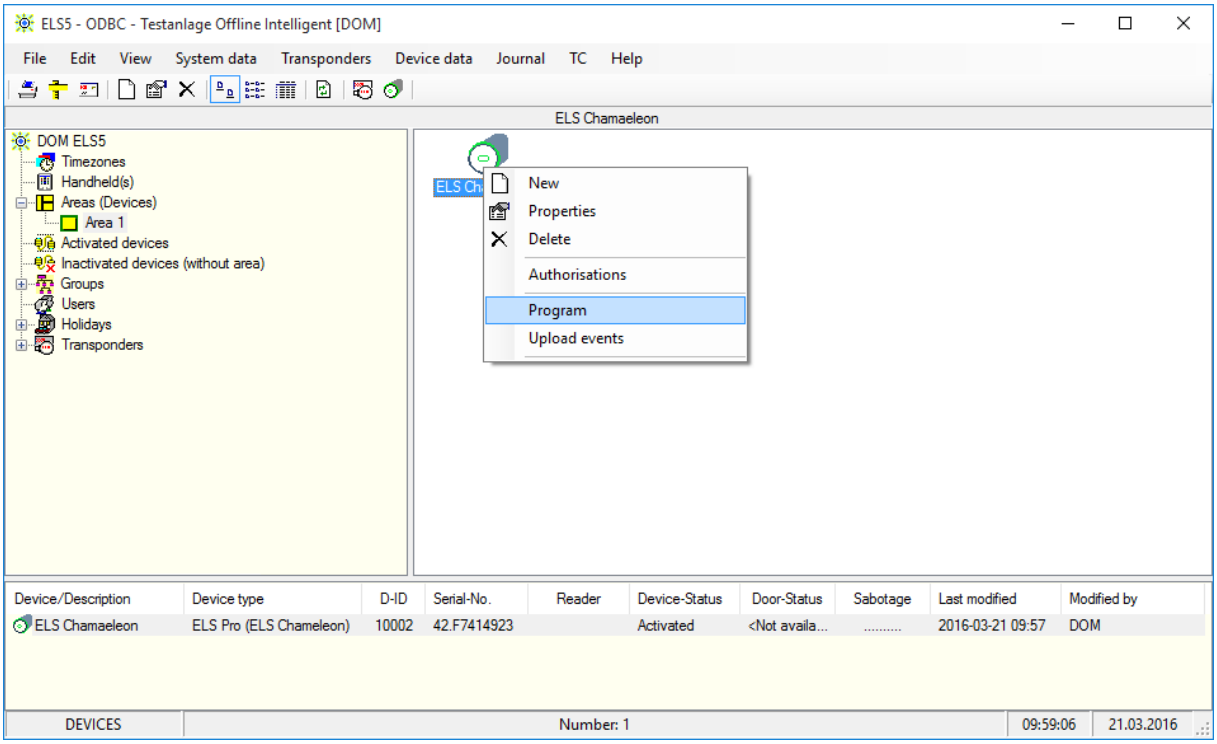

Confirm by pressing [**OK**] and click the tab **General**.
Click the button [**Get version / battery ?**].
Present the wireless wake-up card.

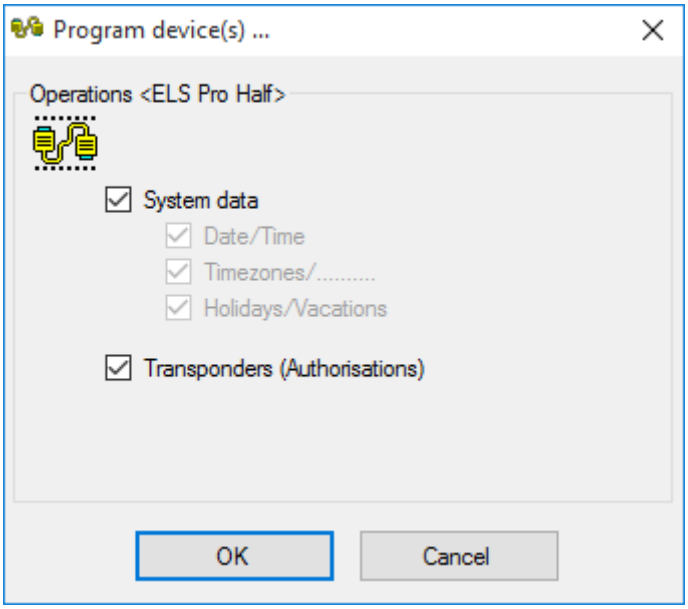

The authentication process is thus completed.
Click [OK].

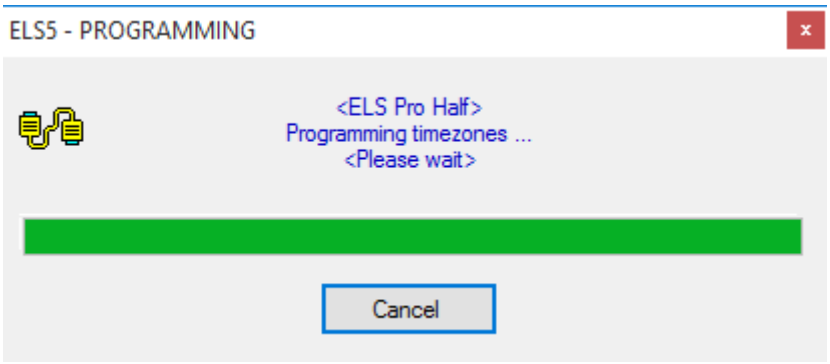

After you have assigned authorisations to the device, the device must be programmed.
Right-click on the device and select **Program**.

The following window appears.

Click [OK] and then present the wireless wake-up card again.
Programming is carried out.

Commissioning of the ELS Pro has thus been completed.

You can now set the status of the device back to **deactivated**.
(Important if you are using the ELSmobile software for programming at the same time.)
